■ 4. Authentication & Access Control Logic

Key design principle: Dashboard IS visible to guests (public shell), but personalised content and protected actions require login. Cart works for guests via localStorage — login gate triggers only at checkout. This is exactly how Udemy handles it.

Action	Guest (no login)	Logged-in User
Browse Home	■ Full access	■ Personalized feed
Search Courses	■ Full access	■ Full access
View Course Page	■ Preview only	■ Full preview + enroll
View Dashboard	■ Visible (public shell)	■ Shows enrolled courses
Add to Cart	■ Allowed (cart stored)	■ Synced to account
Add to Wishlist	■ Prompt to login	■ Saved permanently
Checkout / Pay	■ Must login/register	■ Proceed to payment
View Purchase History	■ Redirect to login	■ Order history page
Write Review	■ Prompt after enroll	■ Post-enrollment only
Watch Course Videos	■ Enroll required	■ If enrolled
Instructor Dashboard	■ Login + instructor role	■ Instructor role only
Profile Settings	■ Login required	■ Full access

Guest Cart → Login → Checkout Flow

```
// 1. Guest adds course to cart
localStorage.setItem('guestCart', JSON.stringify(cartItems));

// 2. Guest clicks 'Checkout'
if (!isLoggedIn) def css_code_block(lines):#123;
navigate('/login?next=/checkout');
def css_code_block(lines):#125;

// 3. After login → merge carts
const guestCart = JSON.parse(localStorage.getItem('guestCart') || '[]');
await api.post('/cart/merge', def css_code_block(lines):#123;
guestItems: guestCart def css_code_block(lines):#125;);
localStorage.removeItem('guestCart');
navigate('/checkout');
```

Protected Route Wrapper (React)

```
const ProtectedRoute = (def css_code_block(lines):#123; children def
css_code_block(lines):#125;) =def css_code_block(lines):gt; def
css_code_block(lines):#123;

const def css_code_block(lines):#123; isAuthenticated def
css_code_block(lines):#125; = useAuth();
```

```
const location = useLocation();  
if (!isAuthenticated) def css_code_block(lines):#123;  
return def css_code_block(lines):lt;Navigate to=def  
css_code_block(lines):#123;`/login?next=$def  
css_code_block(lines):#123;location.pathname=def  
css_code_block(lines):#125;`def css_code_block(lines):#125; replace  
/def css_code_block(lines):gt;;  
def css_code_block(lines):#125;  
return children;  
def css_code_block(lines):#125;;
```
